Course Location

Aventura City, Miami, Florida, United States of America

ABOUT THE INTRODUCTORY VEIN COURSES

IVT embraces the synthesis of ideas and methods in order to provide the best care and outcome for your patients according the cutting edge technology and state of art in the specialty of Phlebology.

ABOUT ALEJANDRO G. CABRERA, MD

Dr. Cabrera is a General Surgeon, specializing in the field of Phlebology since 1996. A pioneer in minimal invasive office based procedures for varicose veins in Santiago Chile. In 2003 he became the first international affiliate of the Veintec, Varicose Vein Clinic group, an American association of surgeons who were developers and early adapters of outpatient diagnosis and treatment of venous diseases. His achievements in Chile and South America have made a significant contribution to making these methods the ‘gold standard’ of care.

Dr. Cabrera is an internationally recognized expert and educator.

The founder and Medical director of The International Institute of Vein Technology in Miami, Florida has been a faculty Member at The American College of Phlebology, and is Medical Director of Veintec Clinics in Chile and South America.

MISSION

The mission of The IVT is to advance education in the state of the art in Phlebology, a relatively new specialty in medicine. Using the multi centric experience of Veintec Varicose Veins Clinics as a success model in office based vein health as practiced economically and effectively for 30 years in multi-centric settings.

Personalized teaching, DEMOS and hands on experience

IVT exhibits in the heart of Aventura, a wonderful spot, within walking distance to the famous Aventura Mall. Only minutes to Miami's beaches, restaurants, shopping, golf courses and marinas.

MORE ABOUT THE COURSES

Because of the high prevalence of venous disorders such as varicose veins in the general population and especially in women, the need for cost effective minimally invasive effective methods of diagnosis and treatment has become much more important in recent years.

Although many specialized clinics have been using these ever evolving techniques for many years, it has become clear that other more generalized practitioners and non-phlebological specialists can benefit from adding venous diagnosis and treatment to their armamentarium. IVT is focused on providing the knowledge and expertise to make that happen.

Technological advances in areas such as imaging, new devices, techniques and new medications to treat vein problems have undergone substantial changes over the past two decades.

Dr. Alejandro G. Cabrera, has been a pioneer in his country who has introduced all the new technologies and innovations in this field. He has developed a network of physician practices with multiple skill levels and geographic locations which has

resulted in bringing these advanced methods to a much larger group of practitioners and patients.

The model has been developed based on the Veintec Franchise Model, originally developed in the U.S.A. and used internationally.

The IVT teaches a novel office based approach to vein disorders and has created a variety of courses and programs to take your skills to the next level.

Whether your goal is to develop a new specialty, learn about career development opportunities, or simply to provide more profitable services in your medical practice, you will find IVT to be a valuable experience.

INTRODUCTORY COURSES BENEFITS

Learn an overview of the specialty of Phlebology.

Find out about this proven approach to begin your professional career in this field.

Acquire basic skills to properly diagnose vein disorders and utilize ultrasound testing

Learn how to perform Sclerotherapy for reticular and spider veins.

VISITING PROGRAMS

Optional complementary visiting programs are available. Introductory Course participants may arrange to spend two weeks observing at a busy vein center in Santiago, the capital city of Chile, where you may observe and participate in the care of real patients under the supervision and guidance of Dr. Alejandro G. Cabrera, director of IVT.

PRECEPTORSHIP

Preceptorship is another way to reach your goal of starting a venous practice. Whether you are beginning a new practice, or expanding the scope of an existing one, the preceptorship program can be customized to fit your needs. The IVT program can provide any help you may need, including clinical and practice management protocols. The IVT format is based on the methods developed and improved by Veintec over the last twenty years.

TESTIMONIALS

Vein Course gave me the opportunity to explore a specialty I did 't know very much. Got the competence to perform a systematic Ultrasound Examination, allowed me to establish the right Diagnosis and Treatment Plan to the patients.

Dr. Maria de Los Angeles Romero , MD

"I'm fully satisfied about the overview I got at The Introductory Course. It has been an excellent academic and professional experience, which has allowed me to get the tools for establishing the Treatment Plan for my patients. All of this with guidance from an excellent team of professionals.

It is a great opportunity for physicians who might be interested in being part of this specialized field and pioneering successful treatment and diagnostic methods at the forefront of current technology."

Dr. Kimberly Moreno, MD

I did the Course in march 2018.

Have Joined The Veintec family in Chile after the Course it has been a very enriching experience which has allowed me to grow personally and professionally, learning Phlebology in a respectful and trusted environment.

Dr. Orianna Moreno, MD

The institute offers Registrations discount scholarships for doctors under 40 years old.
